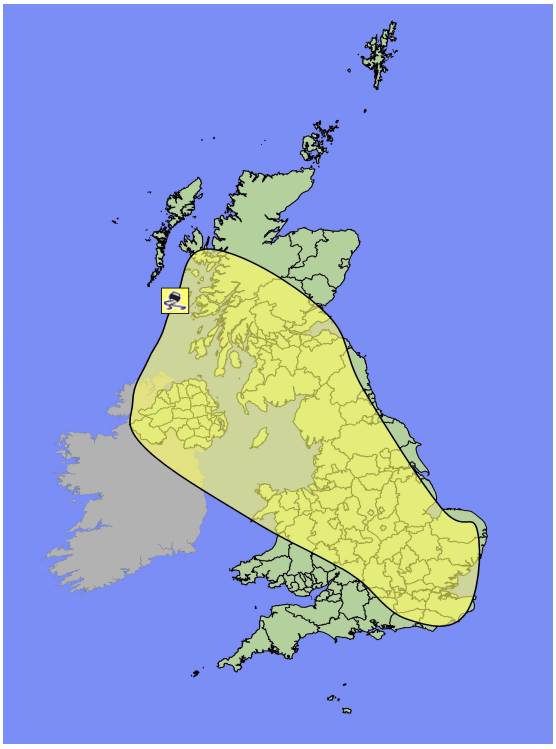
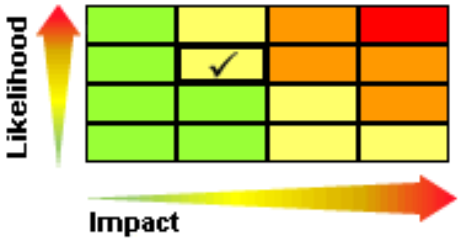
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal band of cloud and wintry precipitation will slowly drift southwards with cold air following from the north, leading to an ice risk. The front will clear southeast England late on Wednesday morning.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **16:00 on Tue, 04th Dec 2012** until **12:00 on Wed, 05th Dec 2012**

Outbreaks of rain, sleet and snow will be clearing southwards on Tuesday night and early Wednesday, leaving surfaces wet and prone to freezing as skies clear and temperatures fall. There is also likely to be a slight covering of snow in places. However, across parts of southeast England, particularly Kent, some 2-4 cm of snow is possible this morning. The public should be aware of the risk of difficult driving conditions.

This warning has been updated to include a greater risk of snow accumulations over parts of southeast England.

The public should be aware of the potential for increased iciness, especially early on Wednesday, and possible disruption to travel.
